Cancer Test

What is the Nu.Q® Vet Cancer Test?

The Nu.Q® Vet Cancer Test is your ally in the fight against cancer, designed to aid in early detection with your beloved dog in mind.

Perfect for senior dogs aged **7 and older**, as well as **younger** dogs at **increased risk** due to their breed or genetics.

How Does the Test Perform?

Highly Specific: Boasts a 97% specificity rate, minimizing the stress of false positives. This means it's very accurate at identifying dogs that do not have cancer, providing reliable results.

Detects 76% of systemic cancers, including lymphoma, hemangiosarcoma, and histiocytic sarcoma.

Your Next Step

Incorporating the Nu.Q® Vet Cancer Test into your dog's regular health check-ups is more than just another test; it's a critical step towards proactive health care.

This test empowers you with knowledge, enabling timely, informed decisions about your furry friend's health needs.

The Value of Screening

Ask your veterinarian about the Nu.Q® Vet Cancer Test today!

Key Takeaways

Cancer screening is recommended for healthy dogs aged 7 and older, as well as younger dogs at increased risk due to their breed or genetics

The Nu.Q® Vet Cancer Test detects 76% of systemic cancers, including lymphoma and hemangiosarcoma which together account for one-third of all canine cancers.

Taking a proactive approach to your pet's health strengthens the bond you share with them and empowers you to make informed decisions.
