

# Introducing the nu·Q vet

## Cancer Screening Test

### You get health screenings for yourself, so why not for your family dog?

Like humans, dogs are at risk of cancer. In fact, cancer is the leading cause of death in dogs over the age of two years old. Sadly, 1 in 4 dogs will develop cancer during their lifetime.

Like humans, early diagnosis can make all the difference in their treatment and quality of life. However, currently, dogs are typically diagnosed when they are unwell or there is a suspicion of cancer.

The Nu.Q® Vet Cancer Test is a simple blood test that can help detect cancers in their early stages, giving you more options to care for your pet.

### What is the Nu.Q® Vet Cancer Test?

The Nu.Q® Vet Cancer Test is your partner in the fight against canine cancer. Designed with your beloved dog in mind, this simple, non-invasive blood test aids in the early detection of canine cancer.

Recommended bi-annually for all senior dogs aged 7 and older, as well as younger dogs with an increased cancer risk due to their breed\* or dogs with a family history of cancer. It should be used as a screening test while your dog is healthy **before the first sign of cancer** appears.

\* Breeds with an increased risk of developing cancer early in their lifetimes include:

Golden Retriever	Rottweiler
Labrador Retriever	Great Dane
French Bulldog	Irish Wolfhound
Boxer	Scottish Deerhound
Beagle	Mastiff
German Shepherd	Flat Coated Retriever
Bernese Mountain Dog	Welsh Corgi
Siberian Husky	

### What will the test tell me?

The **Nu.Q® Vet Cancer Test** accurately identifies the risk of your dog having cancer, from low-risk to high-risk. This is valuable information for both you and your veterinarian.

It reliably detects 76% of systemic cancers (cancers that affect the entire body), including some of the **most common cancers in dogs**, like lymphoma, hemangiosarcoma, and histiocytic sarcoma.

### Why does this matter?

We screen for cancer in humans because early detection can save lives. We encourage our family and loved ones to schedule their regular checkups and complete any required screening; our family dogs deserve the same chance.

By detecting cancer earlier, they can start treatment before symptoms appear, when they can tolerate treatment better. The goal is to support a longer, healthier life.

This also allows you to prepare for the next stage of your dog's life, if they are unable to receive treatment.

## Your next step

Incorporating the **Nu.Q® Vet Cancer Test** into your dog's regular health checkups is more than just adding another test; it's a critical step towards **proactive health care**. This test gives you and your veterinarian knowledge, enabling timely, informed decisions about your family dog's health needs.

Plus, it's **affordable**, making it an easy add-on to your dog's annual wellness routine blood work.

### How to get the test

Ask your vet about adding the **Nu.Q® Vet Cancer Test** to your dog's next wellness visit.
